\$2 Per Year

Waterways, First Step For Farmers Planning To Expand Corn Production

by Don Timmons

There are two interesting trends that seem to be developing in Lancaster County crop production and in the state: 1) an increase in corn production over the past four years at the expense of small grains; 2) more of the total corn crop being produced for silage during the same four-year period.

How accurately this change-over to corn can be related to dairy farmers switching to livestock production is a matter of some speculation. For whatever reason, corn is apparently gaining and small grain production is declining.

This means several things to the farmer who is trying to utilize his corn land to the fullest. One, if he no longer has dairy, his need for corn is greater than his need for hay. So rather than tie up the land

with contour strips which he once cropped for hay, he is now looking for ways to put all or most of his land into corn.

Secondly, though he continues to plant on the contour when he replaces the strips with a row crop such as corn, he is wide open for soil erosion.

WATERWAYS

The first step in converting to all-corn production—whether for grain or silage—is to develop some means for 'walking' the water off the fields so that it doesn't erode the soil.

Grassed waterways are essential to this intensive type of production on any slope greater than three percent, according to Soil Conservation Service (SCS) work unit conservationist Orval A. Bass. While waterways were also needed on

(Continued on Page 6)

THIS LUSH WATERWAY on the New Providence farm of Vincent Hoover was completed last year. Here, Hoover, left, and Orval A. Bass, SCS conservationist, examine the stand of tall fescue, redtop, birdsfoot trefoil, and Reed canarygrass. Hoover will cut this for hay soon. L. F. Photo

Clark Stauffer Tops Exhibits At 4-H Conservation Roundup

At the first annual 4-H Conservation Club roundup, held Monday night at Ephrata High School, Clark Stauffer was awarded a plaque for best all-around performance. He was scored on his record book, and on his first-place exhibit which showed the use of cover crops to control soil erosion. His exhibit included photographs and actual soil displays with and without cover crops.

Clark, the 13-year-old son of Mr. and Mrs. Aaron Z. Stauffer of Ephrata R1, serves on the game committee of the Northern Lancaster County 4-H Conservation Club and is active in the Baby Beef and Lamb Club and in 4-H tractor club work.

Plaques were also presented to Curtis Horst for second place and to Debbie Schantz for third.

The roundup was joint effort of the Northern and Southern Lancaster County 4-H Conservation Clubs. It was

held in conjunction with a special meeting of the county SWCD directors. Exhibits were judged by Charles Slaton, U. S. Soil Conservation Service public information officer and by district vice chairman Henry H. Hackman.

Associate county agent Winthrop Merriam who presented the plaques, also announced that Ronald Stauffer had placed first in the recent district division of the State Conservation Contest. His placing won him a three-day conservation (Continued on Page 6)

Lanc. Pork Producers Seek Queen; Full Slate Of Officers Reelected

At a recent meeting of the Lancaster County Swine Producers Association directors reelected all officers and decided to hold a contest this year for a Lancaster County Pork Queen.

James Horton, Masonic Homes Farm, Elizabethtown, was installed as a new director of the association. He was elected to a three-year term at

James Horton, secretary-treasurer. They will serve during the 1967-68 year. Reelected were John Henkel, president; Warren Leininger, vice president; and James

Win Merriam To Leave County Extension Staff

Lancaster associate county agent Winthrop Merriam announced this week that effective June 7th he will be resigning from the county extension staff.

Merriam states he has accepted a position at West Virginia University, Morgantown, W. Va. He will be part of a four-member state 4-H staff; his title will be State Extension Program Leader — 4-H and Youth Development.

Merriam came to the county in 1958 as assistant county agent. He was promoted to associate agent in 1962.

In commenting on his resignation, he noted he regretted leaving the county after nine years' service here but felt this opportunity is just too (Continued on Page 5)

Harnish Cow & Fisher Herd Top April DHIA

A registered Holstein cow owned by John M. Harnish, Beaver Valley Pike, completed the highest individual 305-day lactation during April, according to the Red Rose Dairy Herd Improvement Association. She produced 21,681 pounds of milk and 899 pounds of butterfat.

The herd having the highest monthly butterfat average was owned by Joseph L. Fisher of (Continued on Page 4)

Temperatures can be expected to continue averaging below normal for the next five days, says the weatherman. He looks for the "cool" to prevail throughout the period, but promises milder temperatures about mid-week.

And MORE RAIN is being called for with amounts totaling greater than 1/2 inch, expected over the weekend.

CLARK STAUFFER displays the first-place plaque which he won Monday night at the roundup of the Northern and Southern Lancaster County 4-H Conservation Clubs. Stauffer's prize-winning exhibit demonstrated the effects of ground cover on soil erosion. L. F. Photo

Weekly Poultry Report

Eastern Pennsylvania
And New Jersey

WEEKLY SUMMARY

LIVE HENS

Prices on light hens were unchanged to 1/4c lower. Demand only fair. Local offerings barely adequate. Most plants supplementing supplies from outside areas in moderate volumes. Offerings on heavy hens ample for the light buying interest. Some inquiry for roasters over 7 lbs. remained unfilled due to limited open market offerings. Prices paid at farm: Light Type hens 5-6 1/4, mostly 5-6c; Heavy 12 1/4-14c.

TURKEYS

Current offerings very light for fair to good buying interest. However, increased offerings noted for movement by the end of month. Some price negotiations developed for heavy hens for movement during week of May 27 centered at 22c per lb to be picked up at farms.

Fogelsville

May 9, 1967

(Prices paid dock weights, cents per lb., except where noted)

Hens, light, 5 1/2-10, mostly 6-6 1/2; Hens, heavy, 9-23, mostly 14-18; Pullets, 22 1/2-38 1/2, mostly 30-38 1/2; Roasters, 10-36 1/2, mostly 32-36 1/2; Turkeys, hens, 33-37; Rabbits, 37-59, mostly 50-59; Guineas, 87 1/2-92 1/2; Pigeons (per pair), 37 1/2-180, mostly 90-

100: Jumbo Squab, 90.
Total coops sold: 470.

Eastern Shore Exchange

WEEKLY SUMMARY

Lot-average broiler and fryer live prices averaged more than one-half cent higher this week at 15.46 cents per lb.

Prices paid during the week ranged from a high of 16.3 cents per lb. on Tuesday and Wednesday, to a low of 14.2 cents on Thursday.

Sales for the week at 951,900 head was about 1/4-million head under last week's totals.

From Where We Stand . . .

Change The State Constitution?

At the primary election next Tuesday probably the most far-reaching choices voters will make will be on the nine-point Constitutional question.

The first question is: do we want a Constitutional convention to study and rewrite articles and sections of the State Constitution?

If approved by the voters, the 150 convention delegates who will later be elected from the 50 senatorial districts, will be charged with rewriting four sections of the Constitution — the articles on judiciary, local government, reapportionment and taxation-finance. They will be specifically prohibited from changing the Constitution's uniformity clause which the courts have held bars a state graduated tax of any kind.

Proponents of changing the Constitution have tried for voter approval six times since 1892. And six times the bid for change was rejected at the polls — although it only lost by 39,600 votes in 1963.

The approach this time is on a bipartisan basis with former governors Scranton and Leader heading the Committee for 9 Yes Votes.

And this time proponents of the change are not trying to push a complete rewriting which would have to be accepted or rejected by the voters as a package.

Now they have selected certain specific articles and sections for revision. After these are rewritten, each must be presented in the 1968 primary for individual approval or rejection.

So, there is no question involved here that anything is going to be "put over" on the people through a Constitutional convention. There is also no question but that several of the articles proposed for revision should be revised. We see no reason why the amendment machinery presently existing in the Constitution couldn't have been used to update the document. But, aside from the added cost of a convention, we can see no danger inherent in such a limited convention.

So much for the first question. There will be eight other questions on the ballot which you should accept or reject according to your individual views. These are presented as amendments to the Constitution and, if approved by the voters, will become law.

Items referring to having the legis-

lature sit in continuous two-year sessions permitting the governor and Lt. governor to succeed themselves for one term, reducing the residency requirements for voting, and repeal of article seventeen of the Constitution (referring to canal and railroad regulations) — with these, we have no argument. The articles are obsolete and probably do impede progress.

Question 6-A, however, asks your permission to streamline the process for amending the Constitution "in the event of a major emergency". But, the term "emergency" is too loosely defined in the question. Passage of this amendment could be dangerous without more specific definition of the term emergency. A "no" vote on question 6-A would throw it back to the convention (if one is held) for further clarification.

Question 8-A asks for a \$500-million bond issue to wage war on pollution and to create a land and water conservation and reclamation fund.

While we're 100 percent for conservation and reclamation of our natural resources, we don't want to see any more Class I and Class II farmland taken out of production through the Project 70 land acquisition program. We realize that, more and more, we will have to share our fair countryside with city folks and tourists. Such land sharing will be in the form of parks and other public lands. But we'd like to see greater discretion used in purchasing land — certainly there's plenty of land in Pennsylvania that would be suitable for little else. Purchases should be limited to such land, and productive farms must be allowed to remain in farms.

Someday we're going to need all the "good" farms to feed the people who today require the parks.

So, our answer on question 8-A? — Yes, but with reservations. If it is approved, our legislators will have to carry the ball and press for farsighted use of the land acquisition funds. But the good outweighs the bad in this question, we think.

What you, the voters, will think and do with these constitutional questions remains to be seen. Some updating of our Constitution is unquestionably needed. While a convention may not be the best possible way, it does appear to be the best way so far offered since the Constitution was written in 1873.

Of God or Man?

Lesson for May 14, 1967

Background Scripture: Acts 5:29-32
Devotional Reading: 1 Peter 2:13-17

Let's assume that your pastor is involved in the drive to secure equal opportunities in employment and housing for Negroes in your community. Let's assume further that he has refused to heed official warnings to cease this activity and is imprisoned. Finally, assume that he has escaped from prison and has resumed his activities in this cause. What reaction would there be from you and

Rev. Althouse, your church to such a pastor? Is this not civil disobedience?

That is what we call it today. In the day of Peter and John it may have been called something else, but it was really the same thing. These men believed that their obedience to God made it impossible to obey civil authorities in a particular situation. In this case, you will remember, it all started when Peter and John healed a man by the Beautiful Gate and then witnessed to the power of Jesus. Dragged before the Council, the two disciples were warned not to heal, preach, or teach any more in the name of Jesus.

Impossible To Obey

Peter and John, however, did not stop their public witness. They continued and, because they continued and thus defied the ruling of the Council, they were thrown into jail for their civil disobedience. Furthermore, by the help of God, they escaped from jail and resumed the very work they had been forbidden to do.

There is really a parallel here, isn't there? Peter and John got into trouble with the civil authorities when, in response to God's guidance, they helped a man who was the victim of a physical disability. Some Christians today have gotten into trouble with the

civil authorities when, in response to what they believed to be God's guidance, they have helped men who are the victims of prejudice and injustice. In both cases there is civil disobedience, an attempt to "obey God rather than men." (Acts 5:29 RSV)

Perspective of Time

Strange, isn't it? Today we remember Peter and John as great heroes of the faith because they obeyed God rather than men. Yet, at the same time, we look down our noses at those who would seek to do the same thing today. Why is it that civil disobedience appears so much more holy in the First Century than in the Twentieth?

Unless we want to reject much of the New Testament, we Christians can hardly say that civil disobedience is never justifiable. Jesus himself participated in civil disobedience when he strode into the temple, overturned the tables of the money changers, and drove them out. That wasn't even a passive act.

Ah yes, we say, but Jesus and Peter and John were doing the will of God. Yet, isn't this also the motive of those engaged in controversial issues of conscience today? True, we argue, but suppose we don't agree that this is the will of God? Then what?

God Always Prevails

There's the rub, isn't it? How do you respond to someone who believes he is doing God's will, when you don't agree or aren't sure? This was the same problem that confronted the leaders of Jerusalem. Peter and John believed that they were doing the will of God, but the men of the Council were certain that they were not. Then it was that wise Gamaliel reminded the Council that if something is of God, nothing will defeat it in the long run; if it is not of God, nothing we do will make it ultimately succeed. God always prevails. So, let us see whether this is of God or of man.

There are bound to be issues over which Christians will not agree concerning the will of God. Let us respect the Christian conscience of one another and follow our own convictions, confident that in God's own time his will prevails.

Controls Cited For Tentmaking Insects

Unlike the Arabs, tent caterpillars and fall webworms won't just "hold their tents and silently steal away." These tent makers are unattractive nuisances that will soon be noticeable in flocks of wild cherry or apple tree branches.

The tent caterpillar is often confused with the fall webworm according to Dr. Dale Bray, chairman of the department of entomology and applied ecology at the University of Delaware. Despite its name, the fall webworm is around from late spring until fall, so you can't tell the insects apart by the time of year. However, their nests are different: the tent caterpillar seldom includes leaves in its tent, while the fall webworm spins its nest around many leaves.

The inch-long webworms are very hairy and pale yellow with black spots. After wintering in cocoons under trash on the ground or under tree bark, the moths lay eggs on leaves in the spring. The first generation makes its webs and feeds for a month. The second generation works in late summer,

these webs are usually larger and more numerous than the spring webs Bray explains.

Tent caterpillars feed on cherry and apple tree leaves for a few weeks; the tents grow larger as the insect gets fatter and longer. On a warm day in May they desert their trees, tents and all. Two and a half inch brownish caterpillars with white stripes down their back crawl around the countryside. Occasionally they climb into houses, annoying tidy homemakers. Most of them, fortunately for the homemaker, find some dark, protected place to change from caterpillars to their resting stage or pupae.

In June small reddish-brown moths come out from the sulfur yellow cocoons and fly to the wild cherry or apple trees. Each of the females lays between 150 and 300 eggs one next to the other, completely girdling the twigs. The eggs do not hatch until next year in late March or early April.

To control both tent caterpillars and fall webworms, spray or dust the tents with a small amount of DDT, lead arsenate or Carbaryl (Sevin) when the tents are still small. You don't need to spray the whole tree; just cover the tent and branches close to it, the entomologist said.

Tearing the nest out by hand at night is another way to control the pests: toss the entire tent into a small pail of kerosene or gasoline. Remove the nest at night because the caterpillars leave the tent during the daytime to feed on leaves. Old-timers thought the best way to control the tentmakers was burning them with a ball of flaming rags soaked in kerosene. This injures the tree and could very easily end in a frantic call to the fire department about an out-of-control fire. So spray with insecticide instead, Bray advises.

Ronks R1 That herd of 322 registered and grade Holsteins averaged 1762 pounds of milk and 67 pounds of butterfat. Second high cow honors went to a registered Holstein owned by John C. Groff, Quarryville R2 with a record of 19487 pounds of milk and 828 of fat in 305 days.

Runnerup for high herd for the month was I Eby Hostetter of Gap R1. His herd of 254 registered and grade Holsteins averaged 1716 pounds of milk and 66 pounds of fat.

Most of us accumulate birthdays much faster than bank balances.

Now Is The Time . . .

By Max Smith, Lancaster County Agent

To Keep Spray Records

Financial farm records are essential in modern agriculture and more farmers are recognizing their importance and value. However, we'd like to call attention to keeping accurate account of all spray materials applied to both livestock and farm crops. With the many kinds of spray materials used, we cannot depend upon memory to support what was done. Special record forms are available from our Extension Office for both livestock and crops. We urge all farmers to keep records of applications made in respect to date, material, and amount per acre.

To Make Small Grain Silage

If severe lodging is taking place with winter barley or winter wheat (haylage) but the important thing is to permit some of the plant juices to escape before putting into the silo. Feed additives will help increase feed value of all kinds of grass silage.

Both barley and wheat should be ensiled when in the blossom stage.

To Will Hay-Crop Silage

If the first cutting of alfalfa or clover is to be made into silage, it is very important that it be wilted rather than directly cut into silage. The wilted silage will be more palatable, have higher feed value, and do less damage to the silo. The amount of wilting will vary down to less than 50%.

Farm-Home Directors To Observe Progress On Center May 16th

The next meeting of the Board of Directors of our Lancaster County Farm and Home Foundation is set for Tuesday evening, May 16, at 8 p.m., in the basement meeting room of the Farm Credit Office, 411 West Roseville Road, Lancaster.

Subjects to be discussed include progress on the Center by Jacob Kurtz, fund-raising plans by Levi Brubaker and John Herr, and scholarship program by Max Smith.

All directors are urged to attend this meeting by the officers, and F&H president, Snively Garber, would like every Board member to have a chance to observe the progress on the building. Directors are invited to come early (7:30 p.m.) and go to the building site to see what is being done. Garber will be there to show the group around before the 8:00 p.m. meeting.

Summer Jobs Good Experience For Youths

Every healthy young person wishes to try working at real jobs, whether they are full-time or part-time ones. Parents need to understand this desire to work as one of the developmental needs of youth, says Mrs. Marguerite L. Duvall, extension family life specialist of Penn State University.

It isn't too early for young persons to look for summer jobs. Without being overprotective, parents can encourage them to try a real job. However, parents and youth should realize there is more competition today for full-time and part-time employment. Because of this competition, experienced young persons get preference for the jobs.

When applying for their first jobs, young people can expect them to be menial. But, such jobs are valuable for the experiences they provide. This is one reason why youth need parents' encouragement and guidance in their job hunting efforts, Mrs. Duvall points out.

Summer jobs provide many good experiences for young people. The pride of earning their own money and working gives them the feeling of

achieving adult status. Holding their jobs and doing good work help young people develop responsibility and self-confidence.

A summer job can suggest career possibilities for the young person who hasn't made up his mind about his future. If he tries various work areas, he may find the job that looked appealing isn't all he thought it would be. Summer work can open up new areas that he wouldn't have thought about otherwise, Mrs. Duvall adds.

Del. Valley To Get Market Pool Starting June 1

All dairy farmers serving the Delaware Valley federal milk marketing area will be paid uniformly through a market-wide pool starting June 1, the U.S. Department of Agriculture announced this week.

In a recent mail referendum conducted by Market Administrator L. S. Iverson, 3,492 area dairy farmers voted, and 3,189, or 91 percent of those voting, approved the amended order adopting the marketwide pool and revising some other provisions, USDA noted.

Consumer and Marketing Service officials said the order sets minimum prices to be paid to dairy farmers supplying milk for the Philadelphia, Pa. and Wilmington Del. metropolitan areas, and for most of southern New Jersey. Prices consumers pay are not set by the order.

Terms of the amended order are identical to those of the April 7 final decision except for an increase in the fluid milk price to farmers based on recent nationwide hearings.

Under a marketwide pool, all dairy farmers supplying milk to handlers under the Delaware Valley order will be paid for their milk at a uniform, or blend price. As the order has operated previously under the individual handler pooling arrangement, prices to dairy farmers who sold to different dealers varied according to the use made of the milk by the individual dealers.

With respect to the pricing of milk from sources outside the Delaware Valley market, the amended order includes provisions similar to those in most other milk orders.

To continue to insure fluid milk (Class I) prices alignment with other federal order markets, the tie to manufacturing milk values will be based on the United States manufacturing milk price series instead of the Midwest condensed series and supply-demand adjustments in the Class I price will be limited to 20 cents in each of the next six months. The Class I price formula will terminate June 30, 1968.

Still other amendments allow cooperatives to act as handlers on bulk tank deliveries to other Delaware Valley handlers, and revise milk diversion, milk shrinkage and classification rules. Also administrative assessments to handlers will be at the maximum rate of four cents a hundredweight instead of the present two cents. The final date for filing handler reports and the announcement of uniform prices to producers will be two days earlier than at present.

A basic requirement for membership in the Future Farmers of America is that a boy must be a student of vocational agriculture in high school, although he may retain his membership for three years following graduation.

● Waterways

(Continued from Page 1)

many farms that strip-cropped, they have an even more important role in an all-corn program.

But by themselves they do not mean much. Bass notes they are simply a first step in developing a working conservation plan for such a farm. They pave the way for the next step — terraces — which slow down the rate at which rainwater moves across the rows. The terraces then deliver the water at slow speed to the waterways which in turn

carry it harmlessly off the field. In slowing the runoff, terraces also give the ground a chance to absorb more water.

SITES VISITED

In an effort to get a better understanding of waterways, this reporter visited several sites this week with Bass to see waterways in various stages of construction.

In commenting on the increased interest in waterways, Bass noted that since July 1, 1966, 30 acres of waterways had been constructed on Lancaster County farms.

The SCS technical staff at

(Continued on Page 7)

PART OF THE 6000 feet of waterways on the Neff farm at Millersville R1. From left, Robert, Christ, and Richard Neff shown on this newly constructed waterway give the viewer an idea of the width and contour of this conservation device. L. F. Photo

ONE OF THE LAST steps in constructing a waterway is stapling down this netting, called Mulchnet, to hold the seed and mulch in place. Here Robert Neff shows how netting is secured over the mulch on Neffs recently completed waterway. Netting doesn't have to be removed, it's made of a paper compound and will rot after its function is completed. L. F. Photo

educational bus trip, which he will take June 26-28.

In the same contest, Merriam noted, the Northern 4-H Conservation Club had placed second in the state as a club entry. A plaque will be presented to the club by the State Assn. of Soil & Water Conservation District Directors, Inc. at a later date.

In addition to the plaque winners, blue ribbons were presented to Ronald Stauffer, Paul Scheuing, and Gerald Martin. Red ribbons went to Jeffrey Pfautz, Ricky Pfautz, and Karen June Horst. White ribbon winners were Dale Groff, Lewis Horst, Myron Zimmerman, Leon Roy Martin, and Galen Martin.

CONSERVATION TALK

Slaton presented an illustrated talk on "Our Pennsylvania Resources". He noted that Pennsylvania is the 16th most important state in the

nation, and has an important part in the job of feeding the world.

"If all the hungry people in the world lined up at your back door, the line would extend around the world 25 times," Slaton said.

"We have to learn how to conserve the land and water we have in this country now," he stated, adding "it is equally important that boys and girls in town learn just as much about conservation as farm children."

Leaders for the northern club are Aaron Stauffer and Leroy Pfautz. Vincent Hoover is the southern club leader.

SWCD

At the district business meeting following the 4-H program, directors discussed plans for

the annual state meeting to be hosted by Lancaster County in November of this year. Mrs. Aaron Stauffer modeled a Pennsylvania Dutch apron and bonnet which the women of the hospitality committee will wear at the state meeting.

Although a final decision was not reached on a date and site for the annual county field day and plowing contest, it was decided that land judging and 4-H tractor driving contests will be included this year.

Directors also accepted eight new cooperator agreements totaling 513 acres.

A doctor says "More people kill themselves by over-eating, than by over-work." Maybe, but it's much more fun.

● Pork Queen

(Continued from Page 1)

the association's annual meeting in March.

QUEEN CONTEST

In seeking a girl to represent the Lancaster County pork industry, the association notes she must be single, between the ages of 17 and 21, must reside on a swine-producing farm, and be the daughter of a member of the Lancaster County Swine Producers Association (parent can qualify by becoming a member by the contest deadline of June 1, 1967).

Contestants will be required to present a short talk, not to exceed five minutes, on one of the following subjects: How to promote more pork consumption; The value of pork in nutrition; What the housewife can do to help the pork market; Any other subject pertaining to the pork industry.

In addition, judges will quiz contestants on subjects relating to swine and pork. Formal dresses will not be necessary for the contest.

By the June 1st deadline any girls interested must have their entries and a picture suitable for news release sent to Warren C. Leininger, Denver, Pa. 17517.

Judging will be on the basis of beauty and personality (30 points), essay content (30 points), and presentation and poise (40 points).

--	---

ONE OF THE RIGS used to shape waterways is this self-loading pan pulled by the tractor shown here on the Jonas and David Nolt farm near Wakefield. Orval Bass, SCS county conservationist, explained that as the pan is pulled along, a cradle breaks up the dirt in a dish shape, and paddles load it into the pan. A bulldozer may also be used effectively for this work, Bass noted.

Waterways

(Continued from Page 6)

the Lancaster office lays out the plan for waterways, advises the contractor doing the actual earth moving and grading, and inspects the job thoroughly after completion. If SCS okay's the waterway, the farmer may have half, or more, of the costs paid under a cost-sharing plan with Agricultural Stabilization & Conservation Service (ASCS). However, such a payment has to have been applied for be-

fore the work started, Bass added.

He estimates the average cost of waterway construction at 35 cents a lineal foot. "This would include everything," he explained, "bulldozing, liming, fertilizing, seeding, and mulching." Under the Agricultural Conservation Program (ACP), the farmer's share of the cost would probably be about 15 cents per foot of waterway.

The benefits a farmer derives from waterways and terraces would vary with soil type, degree of slope, and kind of crops raised, Bass notes. But

the benefits would come in the form of more land available for corn production, and better utilization of available rainfall. The latter factor would have been particularly apparent in the recent drought years.

Agriculture is by far the nation's largest single industry. While the percentage of farm people to total U.S. population is declining, there still are about 14 million persons living on farms. The value of farm products sold in 1966 was in excess of 40 billion dollars.

Army Worms Set To March

Small grain growers, in particular, should watch out for armyworms in the spring, according to Dr. Dale Bray, chairman of the department of entomology and applied ecology at the University of Delaware.

Armyworms like cool, moist weather, he points out. The cool weather this spring and the recent rains may increase armyworm outbreaks. Although they're not a general pest every year, some of these insects show up every spring. Adult moths of the armyworm were taken in traps in April.

Young armyworms are thin, active, bluish-green worms with a black line. Larger worms up to one and a half inches long are hairless and green with dark stripes. Some of the full grown worms have a decided pink cast.

Fortunately, armyworms do not feed on everything that grows. They prefer grass, caution-

gram, and corn, they usually don't bother other plants unless there is no grass, grain and corn close by.

The worms feed mainly at night and hide during the day, so you'll have to search the ground carefully to locate them.

Armyworms are very difficult to control once they are large. Therefore, in infested fields, apply treatment as soon as possible to catch the worms while they are still small, Bray advises.

Insecticides are the best control. Carbaryl (Sevin) cannot be used after boot stage on grain that will be used for food, but it may be used on corn with no restrictions except that the total amount used must not exceed 15 pounds of actual carbaryl per acre.

Toxaphene may be used on either corn or small grains. However, don't feed forage, including ensilage, treated with toxaphene to dairy animals or animals being finished for slaughter, the entomologist cautions.

WHERE: J. Henry Siegrist farm,
R3, Manheim. Located 3 1/2
miles northeast of Manheim
off the Manheim-Pennryn Rd.
1st road left beyond Pleasant
View Rest Home, then 1st
farm.

The ZENDEL Planter is a multi-function device that plants seedlings along the center line of a strip of ZENDEL black polyethylene mulch that is simultaneously laid down by the machine. In one continuous operation, the Planter opens up furrows, proportional to the width of the film used... lays black mulch film... fills dirt into the furrows on top of the film... slits the plastic, forms holes, and sets plants... then compacts the soil around the seedlings. The ZENDEL Planter can handle most row crops — cucumbers, melons, squash, tomatoes, tobacco, etc.

Mulch material is available at your Agway Bee-Line Supply Center. The planter mulcher is available to interested persons on a loan agreement basis. First come — first served.

NEBA To Offer AI Service To Horse Breeders

Horse breeding service is to be offered by Northeastern Breeders Association (NEBA) of Tunkhannock, Pa. starting June 1st. This new service will be the first use of frozen stallion semen in Pennsylvania and New Jersey. Horse Breeders Service of Petaluma, California has developed and patented a revolutionary method of upgrading horses in the United States. The success is indicated by the fact that more than 1,400 mares have been bred with a diagnosed pregnancy rate of 70%. NEBA has been granted the exclusive franchise to handle frozen stallion semen in this area.

NEBA has played a distinguished role in the development and use of artificial insemination of dairy cattle. The cooperative places great emphasis on providing high quality service. High standards will be equally important in offering this new service.

Horse semen is now in supply at NEBA headquarters, it was announced. Several key personnel have been trained to inseminate mares, and additional NEBA technicians will be trained to inseminate mares as the need arises. Anyone interested in such service is advised to check with the NEBA sales technician serving his area or write NEBA.

Horse breeds available in this service include Thoroughbred, Quarterhorse, Buckskin, Arabian, Appaloosa, Pinto, Shetland, and Welch. A selection of stallions in most other breeds is expected to be available at a later date. NEBA Technicians have pedigrees showing the selection of stallions available.

Owners of mares will for the first time be able to use outstanding stallions at a reasonable fee. The most widely known stallion available is Silky Sullivan H-9 (Special mating only). A 1958 Kentucky Derby contender, Silky Sullivan is a Thoroughbred (Quarterhorse). He is a flaming red

chestnut standing 16.3 hands high. He transmits his tremendous size conformation, and speed together with his unusually fine disposition.

Horse owners interested in this service will be expected to sign an agreement and make a deposit in advance of the actual service date. The balance will be due at the time of service. A provision of the agreement between NEBA and the horse owner calls for examination of the mare by a veterinarian prior to insemination.

The foals from A.I. service are not eligible for registration with the various Breed Associations. A Horse Breeders Association official breeding receipts will be given to the owner at the time of service. A permanent official Artificial Insemination Registration certificate for A.I. will be available if the owner desires.

Caution Urged When Farmers Use Own Custom-Mixed Pesticides

Many farmers are mixing their own custom-tailored pesticide combinations, according to Frank Boys, agricultural chemicals extension specialist at the University of Delaware.

A combination of pesticides gives a wider range of insect control since it controls several pests at the same time. If he mixes his own combination, a farmer gets precise control to take care of his particular problem at that one time.

Those problems often change in the course of a season, Boys points out. Since insect resistance to a pesticide may suddenly change, or a new pest may invade the fields, the same combination that worked in the spring may not be as effective two or three months later. For this reason, farmers seldom store mixtures; instead, they

combine chemicals when they need them.

Pesticide combinations can save money. Less of the mixture may be needed to do the job than if the chemicals were used separately.

However, using pesticides together can be dangerous, Boys warns, since there is more danger from residue buildup in and on the crop. Fruit and vegetable growers must be particularly cautious because their entire crop can be seized by the Food and Drug Administration if residues are too large.

The possibility of overdosing and damaging plants or ani-

mals may increase when mixtures are used; some mixtures are more toxic than the same amount of the individual pesticides used separately. Occasionally the opposite is true, and the toxicity is less with the combination, Boys points out.

Use caution when mixing the chemicals, he advises. Because there are more chemicals to handle, the chance of spillage and danger to the handler is greater. Inaccurate weighing becomes more likely also.

The danger to children and pets increases also when pesticides are combined, Boys warns. If they get into a pesticide mixture, the likelihood of a fatal accident is far greater than with a single chemical since it is harder to counteract the effects of two or more chemicals.

NFU Calls For Higher Parity Ceilings

WASHINGTON, D.C. — A House Subcommittee was urged by Farmers Union today to provide more money so price support levels can be boosted to already-authorized ceilings of 90 percent of parity or more for all supported commodities.

Farmers would have \$4.5 billion more in gross income, the farm organization said, if Congress provided money needed to make these support levels operational.

Most of the major commodities now are supported at levels ranging from 66 percent (rice) to 87 percent (manufacturing milk). All could be supported at 90 percent except wheat, which has an authorized ceiling of 100 percent of parity.

The request was made by Tony T. Dechant, NFU president, in testimony prepared for the Subcommittee on Agricultural Appropriations of the House Appropriations Committee.

The Subcommittee, headed by Rep. Jamie Whitten (D-Miss.), is holding hearings on the Department of Agriculture

Budget for the year starting July 1.

Also recommended were a boost in Farmers Home Administration Operating and Farm Purchase Loans to a level of \$2 billion annually; restoration of a \$100 million cut in ACP cost-sharing; a \$6 million boost in The Great Plains Conservation Program; and a \$2 million increase in funds for the Packers and Stockyards Division.

Dechant told the Subcommittee that cost savings resulting from recent improvements in the supply-demand balance in agriculture should be applied to the farm program budget in ways that increase both prices and income.

"Unlike the prophets of gloom and doom who want to get government out of agriculture," he said, "we want to make the commodity programs work better — work for farmers toward the urgent objective of raising prices and income to the level of parity."

Dechant pointed out that price support and diverted acreage payments to feed grains producers, which totaled \$127 billion in 1966, will come to only \$550 million in 1968.

"Producers who made this cost saving possible," he said, "ought to be the beneficiary

Agricultural Output Up In Europe & USSR

Agricultural production increased in Western Europe, Eastern Europe, and the Soviet Union in 1966, with the largest increase occurring in the Soviet Union, according to a report published this week by the U.S. Department of Agriculture.

The report, by USDA's Economic Research Service, reviews agricultural and related economic and foreign trade de-

velopments in the countries of these three regions during 1966, relating these developments to trends of the past five years.

Total and per capita agricultural output in Western Europe continued to rise in 1966, despite poor weather at key periods. Trade in agricultural products by West European countries continued to increase rapidly in 1965, as did U.S. agricultural exports to Western Europe.

Favorable weather moved East European farm production to the highest level on record, some six percent above 1965 and 22 percent above the 1957-59 average. In addition to favorable weather contributing to the successful crop year, there were improved inputs, higher farm prices and incentives, and efforts by the governments to raise farm output.

The Soviet Union's record grain harvest of about 140 million tons, led by a bumper wheat crop of 80 million tons, was the outstanding feature of its agricultural performance in 1966. Record output levels were also achieved for most livestock products, cotton, and oil seeds.

Cautioning that instability in

the countries of these three regions during 1966, relating these developments to trends of the past five years.

Total and per capita agricultural output in Western Europe continued to rise in 1966, despite poor weather at key periods. Trade in agricultural products by West European countries continued to increase rapidly in 1965, as did U.S. agricultural exports to Western Europe.

Favorable weather moved East European farm production to the highest level on record, some six percent above 1965 and 22 percent above the 1957-59 average. In addition to favorable weather contributing to the successful crop year, there were improved inputs, higher farm prices and incentives, and efforts by the governments to raise farm output.

The Soviet Union's record grain harvest of about 140 million tons, led by a bumper wheat crop of 80 million tons, was the outstanding feature of its agricultural performance in 1966. Record output levels were also achieved for most livestock products, cotton, and oil seeds.

Cautioning that instability in

Lancaster Farming, Saturday, May 13, 1967—9

grain production remains a problem in the Soviet Union, the report analyzes the major factors which have accounted for the rapid recovery of agricultural production in the USSR in the past three years.

Production of most livestock products increased in all three regions in 1966. Meat production rose in Western Europe and the USSR and fell slightly from the peak 1965 level in Eastern Europe.

Don't plant for the BIRDS!

See us now for ORTHO Bird Repellent

Crows, blackbirds, pheasants — any bird that steals seed won't come back a second time for seed treated with ORTHO Bird Repellent. They spit it out and fly away. It's easy to get this kind of protection for your seed. All you do is pour this repellent right in with the seed in your planter box.

Actually, you're getting more than bird protection with this product. The full name is ORTHO Bird Repellent and Seed Protectant. It also contains an insecticide to control soil insects such as wireworms, seed corn maggots and corn rootworm. And a fungicide for extra protection against diseases like seedling blight, damp-off, and seed decay.

This is the only bird repellent that combines all these protections. So this year, don't plant for the birds. When you get your seed, ask us for ORTHO Bird Repellent.

4-H NEWS

4-H GUERNSEY CLUB PLANS DISTRICT MEET

by Jesse L. Balmer, reporter

The Lancaster County Guernsey 4-H Club met at the Solanco High School ag. room. Twenty-seven members responded to roll call. Jesse G. Balmer, a 4-H leader, announced plans to organize a State Junior Guernsey Association. The next meeting will be a Southeast District meeting. At that time, plans and opportunities for the youngsters will be outlined for the State Junior Guernsey Association.

The time and place for this meeting will be Wednesday.

June 14, at the Guernsey Sales Pavilion. It was also announced that on Saturday, July 8, a statewide meeting is scheduled for State College. Persons under 21 years of age, owning a purebred Guernsey are eligible for membership, and should attend these meetings.

Cindy and Donald Breneman gave a demonstration on "How to Read Pedigrees." After the demonstration, the club song-leader, Cynthia J. Balmer, led the group in a few 4-H songs. The meeting was then adjourned.

KIRKWOOD CLUB HEARS LECTURE ON ALASKA

by Ann Walton, reporter

The second meeting of the Kirkwood Community 4-H Club was held at the Bart-Colerain Elementary School on May 2.

Tim Mills resigned as treasurer and Betty Jackson was elected to take his place.

Mrs. June Hardwick, of Kirk-

Gable Ayrshire Joins 150,000 Pound Club

C. Harold Gable & Son, Elverson R1, was honored at the Annual Awards Banquet of the Ayrshire Breeders' Association held recently at Hotel Roosevelt in Cedar Rapids, Iowa.

C. Harold Gable & Son is the breeder and owner of the registered Ayrshire cow, Neddie's Heather Princess whose lifetime production exceeded the 150,000 pound mark in 1966, qualifying her for membership in the 150,000 Pound Club. Her actual cumulative production totals are 161,734

wood, a native of Alaska, gave an interesting talk on her homeland and her people. She showed slides and articles of handiwork.

Dennis Allen, the club's county council representative, is planning to give a demonstration at the next meeting, which will be held on June 13 at 7:30 p.m. at the Bart-Colerain Elementary School

pounds of milk, 3.83% and 6200 pounds butterfat.

In reaching this production level, the cow was never milked more than twice-a-day. Her remarkable record is a good example of the persistent milking ability of Ayrshire cows under normal farm conditions and their top rating for highest profit-over-feed costs, the association stated.

MARKET EGG PRODUCERS

EFFICIENCY PAYS

DO YOU KNOW THAT:

- A 12½% improvement in feed required per dozen eggs equals a saving of approximately \$350.00 per 1000 hens.
- That our Early Bird All Mash Laying Feeds will definitely produce BETTER SHELL QUALITY over the laying year?
- That each ½% improvement in breakage can improve your income by \$36.00 per 1,000 hens housed?
- A price improvement thru BETTER GRADE of ½ cent per dozen amounts to approximately \$100.00 per 1,000 hens housed?
- If your feeding program gives you 1% better hen house liveability and ½ dozen more eggs per hen housed, it can mean as much as \$175.00 extra return per 1000 hens?
- That GOOD records pay big dividends? Without accurate records you CAN NOT fairly judge the value of your program?
- That it's not the START, it's the FINISH that counts.

May We Help You Do A Better Job?

SECOND SECTION

State To Survey Grain Fields For Cereal Leaf Beetle Invaders

HARRISBURG—A survey to determine if cereal leaf beetles have invaded Pennsylvania will begin May 17 in western Pennsylvania, Leland H. Bull, State Secretary of Agriculture, has announced.

Secretary Bull said the tiny beetle, as yet undetected in the state, is a threat to grain production in any area where it has been introduced.

He said oats, barley and wheat fields in Beaver and Crawford counties will be the principal targets of the survey since these counties are nearest to two Ohio counties where the beetle was discovered last year.

Other counties to be included in the survey for the insect are Allegheny, Armstrong, Clarion, Fayette, Greene, Mercer, Somerset, Venango, Washington, Erie, Westmoreland, Butler and Lawrence.

Spot checks for the beetle

are expected to be made later in Berks and Lancaster counties.

Survey work will be done by specialists, from the state and federal agriculture departments, who will sweep fields with insect nets. Findings will be sent to state agriculture laboratories for identification.

In counties other than Beaver and Crawford, survey work will be concentrated in fields located close to county fair grounds, race tracks and truck terminals where large quantities of hay and straw imported from other states can frequently be found.

Arthur Jeffery, State Department of Agriculture entomologist who will take part in the survey, explained that cereal leaf beetle infestation is often started when hay and straw bedding from fair grounds and

President Assigns Civil Defense Food Duties To Agriculture Dept.

President Lyndon B. Johnson has assigned important defense responsibilities to the U.S. Department of Agriculture, it was announced this week. These include food production and distribution, protection against biological and chemical warfare and radioactive fallout, and rural fire defense, in cooperation with Civil Defense and local government.

Every county or comparable subdivision in the United States is covered by a USDA County Defense Board composed of representatives of Agricultural Stabilization & Conservation Service, Federal Extension Service, Farmers Home Administration and Soil Conservation Service.

Locally, the County USDA Defense Board is Dorothy Y. Neel, ACSC—M. M. Smith, Extension Service—Richard W. Hoover, FHA and Orval Bass,

SCS also working closely with the County Board, Dr. George Smith of Agricultural Research Service, John Kitch, Service Forester and Harry Myers, Civil Defense Director. Regular quarterly meetings are held in the Lancaster County ASCS Office, which has been designated as emergency headquarters.

Specific assignments have been delegated to each agency as follows: ASCS—Food management to effect maximum conservation of surviving food and assure efficient use of food and food facilities. This will include plans for continued production, restrictions and distribution of seed, fertilizer and farm equipment and salvage and distribution of surviving food at wholesale level and food in transit.

Extension Service—Provide information and educational material to farmers, rural people and the food industry concerning survival, production, processing, storage and distribution, and to county and local governments, and information media to assure support and understanding of emergency programs and cooperation in (Continued on Page 16)

Dacamine® Gets To The Root Of Your Weed Problem in Corn

Dacamine weed killer kills the whole weed roots and all. That's because Dacamine works slowly, penetrates deep to kill completely. Best of all, barley crops are safer because Dacamine is non-volatile—goes to work where you put it. And you can rotate crops when you want to. For weed-free corn, higher yields and lower cultivation costs, get Dacamine now.

Mealtime Treats With Cream Of Wheat...

SPENCE

Completely digestible farina cereal, enriched with generous amounts of Vitamin B1, Niacin, Riboflavin, stabilized wheat germ, calcium, phosphorus and iron comes packaged in two ways instant and quick. A popular form of this cereal, Cream of Wheat, is good not only as a hot cereal but can be used as an ingredient in dishes ranging from appetizers to desserts. An example of a dessert is this Pineapple Fluff.

PINEAPPLE FLUFF

2 cups milk
1/2 teaspoon salt
3/4 cup quick cream of wheat cereal
2 tablespoons butter or margarine
1/2 cup sugar
2 eggs, separated
2 teaspoons lemon rind
1 8 ounce can (1 cup) crushed pineapple, drained
1 ripe banana sliced
1/2 cup heavy cream, whipped and sweetened
Dash of ground nutmeg
Bring 2 cups milk and 1/2 tea-
spoon salt to rapid boil. Slowly
sprinkle in cream of wheat, stir-
ring constantly while mixture
thickens. Lower heat and con-
tinue cooking 5 minutes more
stirring occasionally. Add butt-
er, one fourth cup sugar, egg
yolks, lemon rind and pineapple,

and banana. Beat egg whites un-
til foamy. Slowly beat in re-
maining one-fourth cup sugar,
beat until mixture forms soft
peaks, gently fold in the hot
cream of wheat mixture. Spoon
into sherbet glasses, garnish
with whipped cream and sprin-

kle a little nutmeg on top. 1
Makes 6 to 8 servings.

APRICOT CRUNCH

1 8-ounce package dried
apricots

Boiling water to cover apricots

1/2 cup sugar

2 teaspoons lemon rind

1 cup instant cream of wheat

cereal

1 cup brown sugar

1 cup flour

1 cup chopped walnuts

1/2 teaspoon salt

1 teaspoon ground cinnamon

1 stick butter or margarine

Simmer the apricots 20 to 25

minutes or until tender, add

sugar and lemon rind. Combine

following six ingredients, blend

in three-fourths stick butter or

margarine. Sprinkle half mix-

ture in bottom of greased 8-inch

square pan, add cooked apricots

(measures approximately 2

cups with juice), top with sec-

ond half of dry mixture, dot

with remaining butter. Bake in

a moderate oven (375 degrees)

40 to 45 minutes. Serve warm

with cream or ice cream. Makes

6 to 8 servings.

Add cream of wheat to toma-

toes for a delicious casserole —

mustard

1 cup saltine cracker crumbs 1/2
(about 22 crackers)

1/2 teaspoon salt

1/2 teaspoon ground black

pepper

1/2 teaspoon powdered mustard

1/2 pound bacon, cut into small

pieces

1 tablespoon chopped onion

1/2 cup finely chopped celery

2 tablespoons chopped

parsley

2 cups peeled, sliced toma-

toes (about 6)

Combine first five ingredi-

ents. Mix well. Cook bacon slow-

ly over low heat; add onion, ce-

lery and parsley, cook 8 to 10

minutes longer; add to dry in-

gredients. Sprinkle one-third

dry ingredients in the bottom of

an 8-inch square baking dish

and arrange half of the toma-

toes on top. Repeat layers, end-

ing with dry ingredients. Bake

in a moderate oven (375 de-

grees) for 25 to 30 minutes.

Makes 6 servings.

CRAB AND ASPARAGUS

CASSEROLE

8 cups milk

1/2 teaspoons salt

1/2 cup quick cream of wheat

cereal

3 tablespoons butter or

margarine

1 egg, unbeaten

2 teaspoons prepared

mustard

1/2 teaspoon ground black

pepper

2 tablespoons minced onion

2 6 1/2 ounce cans (3 cups)

crabmeat, drained and flak-

ed

3 hard cooked eggs, chopped

1 10-ounce package (1 1/2

cups) cooked chopped

asparagus

1 1/2 cups Swiss cheese, grated

Bring 3 cups milk and 1 1/2

teaspoons salt to rapid boil.

Slowly sprinkle in cream of

wheat cereal, stirring constantly

while mixture thickens. Lower

heat and continue cooking 5

minutes more, stirring occasion-

ally. Add butter and egg, stir

vigorously, add next six ingre-

dients and one cup cheese. Pour

into 1 1/2 quart rectangular cas-

serole, sprinkle remaining

cheese on top. Bake in a moder-

ate oven (350 degrees) 40 to

45 minutes. Serves 6 to 8

BAKED EGG NESTS

8 slices of cooked bacon,

crumbled

3 cups milk

1/2 teaspoon salt

2 teaspoons minced onion

1/2 cup quick cream of wheat

cereal

4 eggs

1/2 teaspoon salt

1/4 teaspoon paprika

Two important things when borrowing money

You need a sharp pencil plus the specialized financial advice of Farm Credit to determine how your financial needs can best be served. Farm production must be maintained, even increased if possible. Providing the financing to insure this is Farm Credit's job. Farm Credit loans are available now for any sound farm need. And, at realistic rates, Farm Credit interest is based on the unpaid balance of the loan. That saves you money.

4 teaspoons butter or margarine

Cook the bacon in skillet over medium heat until crisp, drain on absorbent paper. Bring milk, salt and onion to rapid boil. Slowly sprinkle in cream of wheat cereal, stirring constantly while mixture thickens. Lower heat and continue cooking 5 minutes more, stirring occasionally. Add bacon pieces. Pour into four greased individual baking dishes. Make a hollow in the center, and slip the raw eggs in carefully. Season with salt and paprika and dot with butter or margarine. Bake in a moderate oven (350 degrees) about 15 minutes or until whites of eggs are set. Makes 4 servings.

CINNAMON MUFFINS

1 1/4 cups sifted flour

3 teaspoons baking powder
1/2 teaspoon salt
2 tablespoons sugar
1/2 cup quick cream of wheat cereal
1 egg, slightly beaten
1 cup milk
1/4 cup melted butter or margarine
1/4 cup granulated sugar
1 teaspoon ground cinnamon
Sift together flour, baking powder and salt, add sugar and cereal. Combine egg, milk and melted butter. Make a well in flour mixture, pour in milk mixture all at once. Stir quickly and lightly, until just mixed but still lumpy. Fill 12 well-greased muffin cups two-thirds full. Bake in a hot oven (425 degrees) 25 minutes or until done. Combine sugar and cinnamon, sprinkle on waxed paper. Roll hot muffins in mixture until completely coated. Serve hot. Makes 12 muffins

Fulton Grange Confers 25 Degrees At Meeting

Clifford W. Holloway, Jr., Master of Fulton Grange #66, presided at the regular meeting May 8 when Third and Fourth Degrees were conferred upon twenty-three candidates and two candidates for Colerain Grange.

The Charter was draped in memory of Harry B. Cabaugh and Past State Master Beatty Dinit. A donation was given to the Arthritis Foundation. It was decided to enter a float in the Southern Lancaster County Community Fair.

The Youth Committee sponsored a scrap drive for the benefit of Boy Scout Troop #330 to buy camping equipment. One large truckload and one pick-up truckload of scrap were received.

Rabbi Sampson A. Shain will be the speaker for the memorial service at the next meeting, May 22. The annual homemade ice cream party will be held at the June 12 meeting.

Beetle Survey

(Continued from Page 13) race tracks is used on nearby fields.

Cereal leaf beetle damage is caused by both larvae and adults feeding on wheat, barley, rye, corn, quack grass, brome grass, orchard grass and timothy.

The only satisfactory way ever yet invented to get people to do things, and to do them well, is to get them to want to do them well. Heinen lies the secret of leadership.

Remove Mildew From Clothing Or Furniture Quickly

If you find mildew on clothing or upholstered furniture, take immediate steps to remove it.

Brush mildew from article. Brushing out doors prevents mildew spores from spreading to other parts of the house.

After brushing and airing clean item thoroughly — soap and water for washable fabrics, drycleaning for others.

If possible, take upholstered furniture, mattresses, rugs, and carpets, outdoors. Then brush or vacuum thoroughly to draw out mold.

To clean a bulky item, make thick suds of soap or synthetic detergent heater to speed drying, and very little water.

Brush suds into mildewed for stubborn stains. Rub salt area. Wipe off suds with clean and lemon juice on the stain, damp cloth.

Keep surface of mildewed sunny spot to dry area from becoming any wetter. If fabric can be treated with than necessary. Use fan or (Continued on Page 18)

dissemination of vital information.

Farmers Home Administration—Emergency credit to supplement credit from established sources to eligible applicants in support of the food production program. Also technical assistance in relation to guarantees and other credit arrangements for food processors and distributors in support of the food management program.

Soil Conservation Service—Conduct radiological monitoring in rural areas to determine contamination of agricultural lands and water, and monitoring of farm commodities stored or harvestable on the farm.

Agricultural Research Service—Protection of crops and domestic animals against biological and chemical warfare agents. Radiological monitoring in livestock marketing centers.

Forest Service—Protection from rural fire of resources

and facilities vital to national security and survival, and monitoring service for national forests.

Recently County Defense Board members and the County Civil Defense Director attended a two-day workshop in Harrisburg, conducted by the Pa. State USDA Defense Board, which is composed of USDA Agency representatives at the State level. Workshop was attended by 23 County Defense Boards, State Defense Boards and USDA personnel from Washington D.C., and Civil Defense Directors.

Most of the time was spent completing test exercises based on simulated attack data covering bombing and fallout in Pennsylvania and neighboring states. Each County Board met individually to complete reports of damage assessment and plan of action to be taken.

A politician is a feller who remembers faces, but not promises.

Crop Roundup

The continuation of unseasonably cool weather, coupled with rain and snow is still slowing crop growth and hampering field work, according to the Pennsylvania Crop Reporting Service. Soils dried out enough in most areas to permit field work last Thursday and Friday, but weekend rains stalled activities again. Spring plowing and ground working were the major activities as soil conditions permitted, with oats sowing continuing in northern sections and corn planting getting underway in the south. Other farm activities included spraying alfalfa, liming and fertilizing, spraying fruit, planting vegetables, hauling manure and repairing fences. Soil moisture supplies are surplus in many sections of the State, and adequate in all others.

Lancaster Farming.

age amount of feed. In some areas, pasturing and green chopping of rye is in progress.

POTATOES AND TOBACCO

Planting of fall potatoes is just getting started in many areas, having been delayed by unfavorable weather conditions. Early planted Cobblers are starting to come up, but development has been slow. Planting is nearing completion in the southeast, but only about half finished in other areas. Tobacco seedbeds look good in Lancaster County, but need warmer weather for good growth. Spraying to control diseases is underway.

FRUIT

Cool, wet weather has continued to curtail insect activity, thereby limiting pollination. Although there were a couple cold nights during the week, no further damage to fruit was noted. Peaches and sour cherries continue to show the effects of previous frosts, but apples which are just reaching bloom, show little damage to date. Peaches and cherries are near full bloom in the north, and in the petal fall stage in the south.

OTHER CROPS

Planting of green peas for processing continues as conditions permit. Snap bean planting is just getting underway. Asparagus cutting is active in the south, but growth has been slow. Strawberries are in bloom in southern counties, with small berries forming on early varieties. Planting of tomatoes is just getting underway.

Crop Roundup

(Continued from Page 16)

SMALL GRAINS

Oats seeding continued as weather conditions permitted, and is practically completed in southern areas. Early plantings are up and have good

stands and good color. Sowing has just gotten underway in many northern areas, but is still being delayed by cold, wet weather. Corn planting has just gotten underway in a few southeastern counties, and will be active when warmer weather arrives. Much plowing still remains to be done in all areas.

good in practically all sections of the State and is making moderate growth despite the cool weather. Above average yields are expected for both crops, which are just reaching the boot stage of development.

HAY

Growth of alfalfa continues to be slow because of cool

weather. Alfalfa weevil damage has been bad in some areas already, as a heavy infestation has been noted throughout the State. Warmer weather is expected to increase insect activity, and spraying continues in practically all areas. Grasses are making better growth, but need warm weather to make good use of all the available moisture.

PASTURE

Although most pastures have made enough growth to support grazing, pasturing has been limited in many areas because of soft ground. In sections where pasturing is active, pastures are supplying an aver-

The United States Air Force has been working hard to convince people that there aren't any such things as flying saucers. Now, they're going to build some, to prove it.

New John Deere 480 Mower and Conditioner

**It cuts,
conditions,
windrows**

The new John Deere 480 Mower and Conditioner is a timesaver. In one pass through the field it cuts, conditions, and windrows an 8-foot 9-inch swath.

The 480's pickup reel provides positive feeding in every crop condition. Fast roll speed, large roll diameter, and wide roll opening practically eliminate conditioner plugging and wrapping.

See us soon about a new 480 Mower and Conditioner. Use our Credit Plan.

● Brown

(Continued from Page 13)
Inc. of York, it was announced this week. Brown, a native of Pennsylvania, was employed by a large New England feed manufacturing company prior to joining the Horn staff.

Before entering the feed manufacturing field, he spent many years in various job categories with several of the large dairy breeding farms in

Pennsylvania and New Jersey. His most recent employment in this field has been with Ardrossan Farms of Villanova.

After completing a six-week training program, Brown will be representing the company as livestock representative in Lancaster, Lebanon and Chester counties, and in several counties in New Jersey.

Brown, his wife Gene and their three children reside in Collegeville, Pennsylvania.

Hard-To-Handle Crops Are Easy Going For A Haybine® Mower-Crusher!

New Holland's new Haybine® mower-crusher sweeps through the tallest, thickest crops at up to 8 mph . . . producing an 8 ft 9 in. swath (or a windrow) of fully-conditioned, fluffed-up hay. Whether you bale or chop your hay crops, you'll like the way the reel keeps the cutterbar clear, and practically eliminates plugging . . . even in tangled, downed crops! See this one man haying machine now. Phone or stop in for a demonstration.

LANCHESTER PONY CLUB

1ST JUNIOR HORSE SHOW SUCCESS DESPITE RAIN

Cold rain dampened everything but the contestants' spirits Saturday at the Club's First Annual Junior Horse Show held at Quarryville's Community Grounds, but, according to district pony club commissioner Mrs. G. A. Hassler II, the show was a success thanks to the fine cooperation of all concerned.

Five champion and reserve titles were won, it was reported. These went to:

Small Pony Hunter — Vacation Time. Allison Sharp (champion), Sunshine, Debbie Weir (reserve).

Large Pony Hunter — Hully Gully. Derbydown Stables (champion). Cross Patch, Susan Gill (reserve).

Junior Hunter — What-A-Way. Gail Groy (champion); Ballad, Derbydown Stables (reserve).

Horsemanship (13 & under) — Daryl Sharp (champion); Jill Johnson (reserve).

Horsemanship (14-18) — Sherry Bryson (champion); James Geddes (reserve).

Placings in the 22-class competition were as follows:

Small pony over fences—1, Michael Jordan; 2, Liz Riner; 3, Debbie Weir; 4, Allison Sharp.
